
Vivien Release 2.0

Release Notes

August 2008

Thank you for installing Vivien Version 2.0. These release notes provide the most up-to-date information about content and fixes made to the application.

To Help You Get Started with Vivien

To help you get started using Vivien, a number of sample files and various documentation sources are available for your use.

Documentation sources

Documentation sources are available in several locations for your convenience:

- from the Vivien Install panel during installation
- on the Vivien Version 2.0 CD (in the \Support Documentation folder)
- from the Start>Programs>Vivien shortcut menu (once Vivien has been installed)
- from the Vivien Web site <http://www.viviendesign.com/>

Sources include:

- User's Guide
- Getting Started Guide
- Release Notes

Sample files

Sample Vivien files are provided with the installation for you to use as examples or references. These files can be found in the \Samples folder where you installed Vivien (for example, C:\Program Files\Vivien\Samples).

Vivien-Virtual Event Designer compatibility with *wysiwyg*

Vivien is fully compatible with CAST Software's award-winning lighting design software suite, *wysiwyg*. You can create your events in Vivien and then open the files in *wysiwyg* if you want to add even more sophisticated lighting effects.

You can use Vivien–Virtual Event Designer to increase your planning efficiency. Vivien is the sales, planning, design, and production tool designed for the meeting and special events industry. Once you have created your event in Vivien, you can share your file with a Lighting Designer who can open it in *wysiwyg*. In this way, you can exchange ideas and share updates to your files, taking advantage of the file compatibility between Vivien and *wysiwyg*.

While Vivien deals with the venue, *wysiwyg* deals with the stage. However, both *wysiwyg* and Vivien:

- Feature simplified CAD tools to plot or lay out floor spaces or lighting plans
- Deliver photorealistic renderings of these drawings

-
- Contain 1000s of library objects designed for the industry
 - Share the same reliable, robust base code
 - Deliver eye-popping visuals
 - Provide Wizards for common tasks
-

Minimum system requirements for Vivien

- Intel Pentium 4/Celeron or compatible processor
- 2.0 Ghz or better Windows XP with Service Pack 2 (or later) or Windows Vista
- MAC Intel Processor platforms with Windows XP (SP2 or later) or Windows Vista (on Bootcamp configuration or with Parallels software installed)

Note: When running Vivien on a MAC with Bootcamp, performance is comparable to running Vivien on a PC. When running Vivien on a MAC in Parallels, performance is slightly degraded when compared to a PC.

- 512MB RAM
 - 1024MB or 1GB free disk space (NTFS file system)
 - 1024 x 768 or better resolution
 - OpenGL-accelerated display adapter with 64MB video memory
-

Video card requirements to display Enhanced Beams

To display our new beam simulation in the Virtual Views, the video card requirements have changed for Vivien 2.0. Our new simulation feature takes advantage of advanced graphical technologies available only in OpenGL 2.0. As a result, your computer must have a video card that supports OpenGL 2.0 to run the latest version of Vivien with its enhanced features. If you do not have this type of card, a warning appears and the Enhanced Simulation option will not be available. However, you will still be able to run the software and visualize the beams with our original beam representation.

Hard drive compatibility

Due to restrictions in file name length, you cannot install Vivien on a FAT32-formatted hard drive. Instead, you must install the product on an NTFS-formatted hard drive. For details, see http://www.viviendesign.com/howto.html?tab=Installation_Note.

New in Vivien 2.0

Vivien 2.0 contains the following new features:

Drawing Wireframe Enhancements

- **Ruler Tool:** The new Ruler tool provides a handy point of reference, enabling you to measure the objects that you are drawing and get an accurate idea of the distances between items in your plot.
- **Custom Gobo Wizard:** This new feature enables you to import your own images to the Gobo folder in Vivien's library. You can then enhance the themes of your event files by projecting these custom images (for example, corporate logos) using Vivien's light fixtures.
- **Enhanced Uplighting Truss Wizard Feature:** The Truss Wizard now enables you to specify the direction in which all hung fixtures will face, either upward or downward. If you specify the upward fixture direction when hanging a piece of truss, you can easily create uplighting effects by dragging the truss just below the floor of your venue, leaving only the lights in the venue, shining up from the floor toward the ceiling. In addition, a new truss type called Floor Base has been added. Light fixtures attached to this truss type always point upwards.
- **Enhanced Custom Library Seating Wizard Feature:** The Seating Wizard now enables you to use any of your custom library items with the Wizard. When you create a custom library item, if it is saved in either the Tables or Chairs section of the library browser, they are now available in the Seating Wizard.
- **Replace Fixtures:** When you have designed a Vivien file that includes fixtures, and you would like to replace the existing fixtures in the file with new ones, you can use the new Replace Fixtures feature. Simply select the fixtures, click Edit > Replace Fixtures (or right-click and choose this option) and, from the Fixture Selection window that appears, select the desired new fixture. In so doing, you will replace the existing fixture(s) in the file with the new one, and update all tabs in the file. This feature is extremely useful when you open a Vivien file from previous releases and would like to replace its fixtures with updated versions.
- **Cone Tool:** Need to draw cone-shaped set elements? You can now create cone shapes of any size with our new Cone tool.
- **Enhanced Drawing Options:** When drawing spheres, cylinders, and circles you now have additional choices when specifying the dimensions—you can specify the horizontal and vertical radius.
- **New Line Weight Options:** When drawing lines, you can now choose from a series of pre-defined thicknesses (line weights), and then view a realistic representation of the line in all wireframe views in all modes. For objects like risers and cylinders, you can change the weight of their wireframe outline after you place them in your drawing.
- **Texture Mapping Options:** When you stretch a texture over an object, you can now make sure that it will remain true to the original image by using the Texture Aspect Ratio Stretch feature. And if the object is too big to be completely covered by the texture, you can choose the colour that will be applied to the remaining surface area of the object, kind of like a border that wraps around the picture.
- **Support for AutoCAD 2007/2008 Import/Export:** Vivien 2.0 includes import/export support for the latest version of AutoCAD.

- **Layer Tooltips:** In Vivien 2.0, you no longer have to select objects to find out which layer they're on—the layer now appears when you hover over them.
- **New Options for Renaming:** In Vivien 2.0, you have the option of renaming all elements of any object in your file, both custom-drawn and those inserted from the library. When you save the file, the new element names are saved with it, so you never have to rename them again.
- **Improved Custom Library Objects:** In Vivien 2.0, when you create a custom object, apply colour and texture, rename its elements, and then export it as a custom library object, it stays exactly the same as the original, with all colours and textures applied.
- **New Functionality for Custom Library Objects/Gobos:** Vivien 2.0 includes a new feature for deleting custom library objects that you are not using. Just right-click in the Library Browser and delete the items that you no longer want to keep. This feature also applies to custom gobos.
- **Extended Support for Breaking Solids into Faces:** In Vivien 2.0, you can modify Vivien's existing library objects by breaking them into individual Faces/Lines that you can customize as you wish. When you break these objects up, all of their custom Appearance Elements and Sidedness properties are retained.
- **Boolean Objects, Subtract/Unite/Intersect Tools (FOR ADVANCED USERS):** In Vivien 2.0, you can use Vivien's new "Boolean Objects" tools to cut holes into objects, join objects, and delete everything outside of the common area of two merged objects. A common toolset in CAD-based drawing programs like AutoCAD, the Vivien version includes such actions as Subtracting, Uniting, and Intersecting (the tricky operation of merging two objects and then deleting everything outside of their common area, or intersecting point). In Vivien, you can perform these operations in 2D or 3D.

Virtual View Enhancements

- **Enhanced Beams:** The Virtual View looks more realistic with the enhancements made to our light beams. This new feature adds realism to your file by introducing a soft-edge beam with volumetric representation, beam flare at certain angles, and beam color-mixing.
- **Atmospheric Smoke:** This new feature introduces atmospheric smoke in the Virtual Views. By turning this option on, you can visualize the enhanced beams with still or animated smoke.
- **Texture Appearance Improvements:** Texture mapping has been improved so that all of the textures in your file are even more realistic in the Virtual View.

Library Enhancements

- **New Fixtures in Library:** A list of eight new lighting fixtures has been added to the Vivien library to offer more selection when designing your events. These include some more generic lighting fixtures, such as PARs, Flood, and Fresnel fixtures, a Mirror Ball, and a new Traditional Chandelier. Note that the Crystal Chandelier has been removed from the Vivien library; however, you can still open files that contain the Crystal Chandelier in Vivien 2.0.
- **New Library Objects:** Vivien 2.0 contains many new library objects, such as tables and chairs, people, buffet items, and more.
- **New Preview Images:** The preview renderings of Library objects have been enhanced with consistent and more colorful images.

File Management Enhancements

- **File Compression:** In Vivien 2.0, you can use this new option to compress your Vivien file up to ten times its original size without affecting the contents of the file. When you select this option, Vivien files will take up less space in your computer's memory. You will also be able to send these compressed files as email attachments to your partners and clients with greater ease.
- **Remove Imported Floor Plan:** You can now remove a floor plan image that you imported into your Vivien file by using the new Delete Floor Plan feature.
- **Compatibility with *wysiwyg* Release 22:** You can now open your Vivien files in the latest release of *wysiwyg*, the industry standard lighting design software suite.

In-Place Update

The In-Place update available with Version 2.0 will update Version 1.5 of Vivien to the latest release (Version 2.0). This update is available from our website:

<http://www.viviendesign.com/howto.html?tab=Downloads>.

Library Additions

Casual Woman Sitting 2	
Casual Woman Sitting 3	
Casual Woman Sitting 4	

Fixes

- Bug description:** The toolbars are difficult to move, lose their position easily, and are hard to arrange.

Fix: Toolbars do not lose their positions anymore. They are now easily moved with the new toolbar library, and can be arranged in the desired positions with ease. After toolbars are placed in a location, they remain there until they are moved again.
- Bug description:** You cannot apply a texture to all sides of an object that has been 3D transformed.

Fix: Surfaces that are 3D Transformed can now be textured on all sides of the object.
- Bug description:** When trying to import a large image as a floorplan, the program crashes.

Fix: You can now import large images as floorplans. All textures are handled properly and the program no longer crashes. If you attempt to import an image with a resolution larger than 2048x2048, the program displays a warning, asking you to reduce the image resolution before import.
- Bug description:** After changing some of the options on the Application Options > File Options and OpenGL tabs, the software did not warn you that a restart was required for these changes to take effect.

Fix: For some of the options on the Application Options > File Options and OpenGL tabs, you will now be alerted that the program needs to be restarted before any changes take effect.
- Bug description:** When running a dual-monitor configuration, an issue arises when you move non-docked tools to the second monitor, and then disable the second monitor. In this case, these un-docked tools are inaccessible until you reintroduce the second monitor.

Fix: This issue no longer occurs. The undocked tools are now accessible from the primary monitor even after the second monitor has been disabled.
- Bug description:** When viewing popup windows of the Virtual View on a secondary monitor, the resolution is restricted by the size of the primary monitor.

Fix: This issue has been fixed. The secondary monitor is no longer restricted to the resolution of the primary monitor.

7. **Bug description:** Beams pass through surface combinations that have been copy/pasted into your Vivien file.
Fix: This issue no longer occurs. Beams no longer pass through these surfaces.
8. **Bug description:** When running Vivien on Windows Vista, the program does not close cleanly.
Fix: This issue no longer occurs. Vivien closes properly when running on the Windows Vista operating system.
9. **Bug description:** When a file with custom textures is saved before viewing the texture on the Virtual View tab, the custom texture is not actually saved with the file.
Fix: This issue no longer occurs. The custom texture is now saved with the file even if you do not view it on the Virtual View tab.
10. **Bug description:** Custom textures are not visible when opening a saved file on a second computer.
Fix: Custom textures are now saved with the file properly. When a custom texture is applied to a surface or screen, or saved as part of a custom library object, it will be displayed when the file is opened on another computer.
11. **Bug description:** When you draw a seating area, and then click one of its vertices to resize it, the light emission and Use Layer Properties settings would disappear.
Fix: This issue no longer occurs. These settings remain intact when you resize the seating area.
12. **Bug description:** When drawing a non-rectangular seating area, the remove last step feature is not available.
Fix: This feature is now available in this scenario.
13. **Bug description:** The minimum length of the Pipe truss type is too long for files that require small pipes.
Fix: The minimum length of the pipe (in the Truss Wizard) has been changed to 6" (or 0.2m). For all other truss types, the minimum length is still 2' or 0.5m.
14. **Bug description:** The Truss Wizard does not "remember" the last values entered.
Fix: The Truss Wizards now remembers the last values you entered, making it easier to draw custom lengths of truss.
15. **Bug description:** When you clone a grid, the new objects are inserted on the XY plane in Isometric view, regardless of the workplane selected.
Fix: This issue has been fixed. The clone is now inserted in any of the three planes, XY, XZ, YZ, depending on which one is selected.
16. **Bug description:** The Truss Wizard does not convert between unit types and the Imperial defaults are not consistent. Now, switching between metric and imperial will give you the equivalent measurement in the other unit type.
Fix: This issue has been fixed. You can now switch between Metric and Imperial and see the equivalent measurement in the other unit type.
17. **Bug description:** When a file with a user-defined origin is merged into another file, the file is merged in with the default origin and not the user-defined origin.
Fix: This issue has been fixed. Now the file is merged in with the new origin defined by the user and saved in the file.
18. **Bug description:** The Render Wizard does not oblige you to select an external location to save your rendered image when a browse window is opened, but instead lets you continue through the steps of the Render Wizard without selecting a destination.
Fix: This issue is now fixed. A new Save As window appears which must be closed before you can continue with the Render Wizard.

19. **Bug description:** The status bar does not display the X, Y, and Z coordinates in a user-friendly manner.
Fix: The status bar has now isolated the values of the X coordinate, Y coordinate, and Z coordinate to align them in a way that makes it easier for the user to read the cursor location.
20. **Bug description:** Popup windows in drawing views (Drawing Wireframe and Drawing Quad) do not retain the View Option properties of the parent view from which they are opened.
Fix: Popup windows now retain the View Option properties of the parent view from which they were opened. For example, if the view type of the parent view is the 3D view and the properties have been changed so that the background color, grid style, and grid scale are different than their defaults, the popup window will also retain that information.
21. **Bug description:** When aligning arcs, the alignment feature treats them as full circles in the calculations.
Fix: This issue has now been fixed. Arcs can now be aligned correctly.
22. **Bug description:** When applying images onto screens, the screen would take the color of the layer it was on by default, sometimes resulting in the image not displaying very well (or looking washed out).
Fix: This is now resolved. The screen no longer takes on the layer color by default, but instead adopts the color black, which is best for displaying images.
23. **Bug description:** Elements of custom library items that comprise lines are not rendered.
Fix: This issue has now been fixed. You can now create custom library items containing lines (for example custom lengths of truss) and render them properly.

Workarounds

Vivien 2.0 includes the following workarounds for known issues:

Issue: When you click the Layouts tab, create and attempt to save a new Layout, Vivien crashes.

Workaround: This issue results from a conflict between the Layouts tab and the default printer configured on your computer. As a workaround, you have three options:

- If you have an alternate printer that doesn't cause a crash, set it to be the default.
- If you have Microsoft Office installed, you will have a virtual printer called Microsoft Office Document Imaging Writer. Set this printer to be the default. After doing so, you can print your spreadsheets/layouts/reports/etc. to this virtual printer, and then use the Microsoft Office Document Imaging program (Start->Programs->Microsoft Office->Microsoft Office Tools) to print the file to your real printer.
- You can install and use an alternate virtual printer, such as Adobe Acrobat Distiller or PDFCreator.

Issue: When you try to install Vivien, you receive an error message preceded with one of the following numbers: -5003, -5009, -6001, -6002, or -6009.

Workaround: These messages appear when your computer contains a version of the InstallShield software that is out of date. To rectify the issue, you must rename the InstallShield folder so it is not referenced, and then launch the Vivien install file again.

1. Navigate to the folder C:\Program Files\Common Files\InstallShield\Professional\RunTime\0701.
2. Highlight the 0701 folder, right-click, and select **Rename**.

3. Alter the name of the folder. For example, you could type **old_0701**, and then press **Enter**. The folder is now renamed *old_0701*.
4. Double-click the Vivien install file to run the installation again. If the installation is still unsuccessful, proceed with the following steps to rename the parent directory.
5. Navigate to the folder C:\Program Files\Common Files\InstallShield.
6. Highlight the InstallShield folder, right-click, and select **Rename**.
7. Alter the name of the folder. For example, you could type **old_InstallShield**, and then press **Enter**. The folder is now renamed *old_InstallShield*.
8. Double-click the Vivien install file to run the installation again.

Known Issues

Cannot Copy, Paste, Array, or Move selected objects that include a lighting object

The Copy, Paste, Array, and Move commands do not work on a selected group of objects that includes a lighting object. You can perform these commands on individually selected lighting objects or groups of selected objects that do not contain a lighting object.

Cannot Cut, Copy, or Paste items in the Layouts tab

Copy, Cut, and Paste commands are not available on the Edit menu or toolbar in the Layouts tab.

Cannot Undo, Redo, or Repeat last command in the Spreadsheet tab

Undo, Redo, and Repeat commands are not available on the Edit menu or by shortcut keys in the Spreadsheet tab.
